These diseases can have, and have had, serious consequences for wildlife species and have led to the local extinction of some species. This work is best studied in the context of the other two volumes.

In particular, Malthusian population dynamics or a demographic transition. A description of historic disturbances gave the background for exploring and testing different ecological theories for explaining the functioning of the Serengeti ecosystem. While the Serengeti is a huge area, it is not immune to outside human influences and a new look at this ecosystem includes the human environment surrounding the protected areas. The heterogeneity in the Serengeti is driven by geology, climate, and fire, with Contact News Giving to the Press. The above analyses are a first step in analyzing human behavior and wildlife populations, and their effects on the ecosystem.
