Just curious would a martingale work better for her to keep her head down instead of a tie down and it will still have some give to it? Just kick and go.

But I truly believe that you will want to start by looking at physical problems, t That's why their called 'stud chains' and unless a horse is accustomed to the pressure points and the handler is very knowledgeable about them they can cause the problem to escalate into a blowup. Also, behaviors that have a strong emotional connection, especially those connected to fear, will require fewer repetitions to create strong neural pathways. You want to make sure you're not rewarding her by mistake by stopping what it is she's trying to avoid.

If a horse is moving laterally forwards, it can't goup. She did have bad training rider is to exert no pressure on the horses mouth whatsoever and will only sit on the horse in a relaxed fashion while the

handler works the horse loose in the round pen initially. We ask a lot of them physically, strapping on saddles or harnesses, putting bits in their mouths, and asking them to carry us around, to jump obstacles, and to contort their bodies into positions that require a high degree of strength and flexibility.
