Lectures on Quantum Gravity. The morning lectures, held in the Bob room, will be open to all Perimeter residents and visitors. The workshop will focus on the continuum theory and its semiclassical limit, with applications to cosmology, black holes and holography.

This will be followed by shorter lectures by the participants, tackling the Conceptual and Mathematical Advances in the Search for a Unified Framework Essentially the most not easy difficulties of up to date theoretical physics is the mathematically rigorous building of a thought which describes gravitation and the opposite basic actual interactions inside of a standard framework. Causal set kinematics in general. The revival of the discussion of the foundation of the path integral for gravity is made timely, we believe, by the introduction of new global methods such as Picard-Lefschetz theory.

What are the observables of quantum gravity? Decay of de Sitter space through recast into histories-based form a quantum field theory defined earlier in operator language for a free scalar field on a background causal set.
