Read the following text, which describes the graph. The graph shows annual sales of hardware and software over a period of ten years, from to

The Guardian is a broadsheet, and has a reputation for reasonably accurate reporting. However, the primary reason for the difference in the graphs is not actually shown in the graphs. While a keen observer may have been able to pick out of the table the increase in CO₂ concentrations over the five decades provided, it would be difficult for even a highly trained scientist to note the yearly cycling in atmospheric CO₂ in the numerical graph: The Readers – a feature elegantly demonstrated in the sawtooth pattern of the line.

Electromagnetism module for more information. The top graph is a representation of change in annual mean global temperature normalized to a year period, whereas the bottom graph represents average temperatures in Europe compared to an average over the 20th-century. A topographic map shows data collected on elevation and the location of geographic features like lakes or mountain peaks see Figure 6.
