If there is failure, the device must be removed and replaced, causing additional surgery. Immunosensors have proved their merit as sensitive, high-speed agrifood and environmental monitoring.

An overview of foodborne pathogen detection: Detection of single-digit foodborne pathogens using immunosensors. They are also responsible for severe diarrhea with bleeding and kidney damage resulting from inflammation in the small intestine Lin et al. The second concern relates to the long-term biocompatibility.

Nucleic acid-based sensing systems are more sensitive than antibody-based systems. A similar technique was reported that is based on magnetic nanoparticles with a diameter of 30 nm functionalized with anti-L. The second concern relates to the long-term biocompatibility.
