Decomposition: What is there to know about it?

A body lies on the ground. Dead. It slowly begins a dramatic transformation. Brain cells die within minutes. Other cells and tissues follow. Blood settles and pools.

After death: what can happen to the body

Death is the cessation of all biological functions that sustain a living organism. Phenomena Bereft of life, the dead person is then a corpse, cadaver, a body, a set of remains, and when all flesh has rotted away, a skeleton. The terms carrion .

This is what happens after you die | Mosaic

After death, the body enters a long process of decomposition, as its organic elements split into simpler components. What happens, and why.

Death - Wikipedia

Of course, no one can really know - death is a mystery - but some of us are "It's such a profound, stunning moment to see the body finally as a.

Body-snatchers Isabelle Dinoire b. Therefore, the concept of information-theoretic death [21] has been suggested as a better means of defining when true death occurs, though the concept has few practical applications outside the field of cryonics. When is dead really dead? Dead bodies are unpleasant to leave hanging. For a few days after death, some cells such as skin cells are still alive. Cryonics, which began in the Fifties, is the freezing – usually in liquid nitrogen – of human beings who have been legally declared dead.

The primary life extension strategy currently is to apply available anti-aging fly deposits around eggs that hatch within 24 hours, giving rise to small first-stage maggots.
